

RIDDHI PACHEHARA

Software Engineering Intern | Open Source Contributor | Full-Stack Developer

+91 8077189209 | [Email ID](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

TECHNICAL SKILLS

Programming Languages: Java, C++, Python, JavaScript, Go, SQL

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, Software Design.

Software Engineering: REST APIs, Unit Testing, Integration Testing, Git, CI/CD, Debugging, Performance Optimization.

Cloud & Tools: Google Cloud Platform, AWS, GitHub Actions, Postman.

Frameworks & Databases: Node.js, Express.js, React.js, GraphQL, Spring Boot, MongoDB.

EDUCATION

- B.Tech in Computer Science & Technology | Sanskriti University, Mathura (2023 - 2027)
- Secondary & Senior Secondary | Romex International School, Mathura
- **Technical Milestones:** Solved 200+ Data Structures & Algorithms problems on LeetCode.
- **Certifications:** AI Engineer (OneRoadmap) | AI Track: Deep Learning & Gen AI (Infosys Springboard) | AWS Solutions Architecture | Google Cloud Resources.

WORK EXPERIENCES

freeCodeCamp | Open Source Contributor

- Refactored codebase logic, implementing robust edge-case handling for explicit GraphQL query errors to prevent pipeline failures within the createPages API.
- Successfully cleared rigorous maintainer peer reviews to merge production-ready code serving millions of global users.

AOSSIE Org | Open Source Contributor (GSoC Architecture)

- Contributed to core backend architecture, optimizing system modules and ensuring scalable data workflows.
- Collaborated with global maintainers to review architectural pull requests and streamline backend API performance.

Market Creators | Web Development Intern

- Designed and deployed Node.js REST APIs serving 1k+ users; performed comprehensive functional testing of endpoints using Postman to ensure system reliability.
- Improved mobile responsiveness by ~30% through UI refactoring and cross-device performance testing.

[Website Link](#)

Lensshine | Technical Lead (E-commerce Platform)

- Built a full-stack optical store management software using React, Node.js, Express, and MongoDB.
- Engineered an automated invoice pipeline, developing verification logic to dynamically validate customer transaction histories with zero data mismatch.

[Software Link](#)

NullClass | Web Development Intern

- Engineered a full-stack ticket booking platform, implementing and executing state-driven integration testing for transaction-safe booking, cancellation, and refund workflows.
- Developed modular, reusable frontend components to establish a scalable and maintainable UI architecture.

SELECTED PROJECTS

MedoVeda | Winner, GDG Build with AI Hackathon

- Developed an AI nutrition analysis platform leveraging OCR pipelines and structured prompt workflows, implementing input-validation and hallucination-check filters for real-time risk detection.
- Architected a robust backend to handle asynchronous data streaming and process complex health datasets with low latency. [GitHub](#) | [Live Demo](#)

SynGov | Top 5 Finalist, Google HackDays Delhi 2026

- Built a governance platform for college communities with transparent proposal management and contribution-based voting.
- Integrated AI-powered proposal summaries and blockchain-backed voting for fairer, more informed decisions. [GitHub](#) | [Live Demo](#)
